CUTTING EDGE

Continuity, Presence and Push-Testing Fixtures for nearly 40 years

OUR PIONEER SPIRIT

In lieu of our customary banner photo of “state-of-the-art” cutting equipment in action, I have chosen to share a photo of a wall in our shop that displays tools that belonged to our very own pioneers. This buck saw and other hand tools offer us a constant reminder of how far we have come technically.

The early pioneers may not have been as technically advanced, but they had what it takes in the spirit department. This **PIONEER SPIRIT**, applied today, along with preparing for the rainy days (or droughts) is what it takes for success over the long haul.

This season’s advertising (found in the July 2009 issue of Wire & Cable Connector) focuses on Hale’s **PIONEER SPIRIT** and reflects our vision for the future (puns intended!) which enables us to stay prepared to meet the upcoming needs of our faithful customers. The ad features one definition of **PIONEER** that describes how our products originate out of necessity in the electrical component industry.

A heart-felt thanks to all of our customers for your orders. Without your continued support and faith in our quality product and service, it would be much more difficult to weather this current economic storm.

“LOAD ‘EM UP AND MOVE ‘EM OUT”

(Overheard in the Hale shipping department)

Meeting with friends and customers

This year at the Wire Expo in Milwaukee, WI, Wayne Hunter, owner and president of Hale Manufacturing, was re-visited by an attendee of the 2008 show, Dr. Yogesh Mehrotra of Materials Technologies Corporation of Milford, CT.

Establishing and maintaining professional relationships with our customers and peers in the industry is of extreme importance to all of us at Hale. Please request a visit from our staff and reap the advantages of a Hale one-on-one.

Hale Multi-Adjust Fixture Bases

We have designed and have available many variations of multi-adjust bases for our testing fixtures. When mounting the fixtures directly to a test board, or holding test fixtures during use is not appropriate, our design staff can custom design the most ergonomic and efficient holders for your ease of use.

Please call us to learn more about this adaptable feature.

Take it for a test Drive!

Thinking of upgrading or shopping for new test fixtures? Our prototype department will loan you a new design for an agreed upon timeframe to insure your absolute satisfaction before ordering. You have nothing to lose!

Send us your connector or electrical component to be tested and we will work with you to create and deliver the best possible solution for your testing needs.
